

**Filtration Products**

A leader in oil & gas filtration and the originator of gas filter technology which led to the purity standards used today. Products include Filter Separators, coalescers, and the advanced Gemini Purasep® which offers the highest level of performance.

Filters designed for high flow rates and high solids loading. Commonly used for pipeline pigging and applications where standard filters can not meet the flow and solids loading. Products include pipeline filters, coalescers, cartridges, bags, and other high performance products.

Engineered filters manufactured from special materials for difficult applications. Applications include hydrocarbons, solvents, and high temperatures.

Pleated filters with high solid loading capacity. Included are pleated bags and the patented "Platinum" filter which has very high filter media surface area.

High performance filters for pharmaceutical, food & beverage, electronics, and other precise filtration requirements. Filters are manufactured in a clean room environment.

Industrial filters and vessels. Depth filters include resin bonded and melt blown polypropylene or polyester.

High performance bag filters and bag filter vessels.

Automatic Backwash Strainers.

Filtration equipment for corrosive fluids, plating solutions and acid.

Fabricated Strainer Vessels.

Engineered bag filters and bag filter vessels.

**Other Products**

CPI Rental Vessels are an industry leader for High Pressure and High Flow filtration. Vessels hold high capacity 80" filters which provide maximum flow and solids holding in each vessel size. Skid mounted units with quick opening closures are available in pressure ratings from 200 psig to 2220 psig. Flow capabilities reach 7,000 gpm for water and up to 9,500 gpm for LPG.

Quick Opening Closures. T.D. Williamson closures are safe and easy to operate.

Submersible pumps, vertical multistage pumps, and end suction centrifugal pumps.
